

format this

Certainly! Here's the formatted version of your SQL questions and answers, organized clearly with headings and code blocks for easy reading:

1. Retrieve all records from the employees table

Question:

Write a query to get all columns from the employees table.

Answer:

```
SELECT * FROM employees;
```

2. Get the unique job titles from the employees table

Question:

Find all the distinct job titles.

Answer:

```
SELECT DISTINCT job_title FROM employees;
```

3. Get the number of employees in each department

Question:

Write a query to count how many employees are in each department.

Answer:

```
SELECT department, COUNT(*) AS num_employees  
FROM employees  
GROUP BY department;
```

4. Find the second highest salary

Question:

Write a query to get the second highest salary from the employees table.

Answer:

```
SELECT MAX(salary) AS second_highest_salary
FROM employees
WHERE salary < (SELECT MAX(salary) FROM employees);
```

5. Find employees who earn more than the average salary

Question:

Write a query to get all employees earning more than the average salary.

Answer:

```
SELECT name, salary
FROM employees
WHERE salary > (SELECT AVG(salary) FROM employees);
```

6. Join two tables: employees and departments

Question:

Get the employee name and department name from employees and departments tables.

Answer:

```
SELECT e.name, d.department_name
FROM employees e
JOIN departments d ON e.department_id = d.id;
```

7. Get top 3 highest-paid employees

Question:

Write a query to find the top 3 highest salaries.

Answer:

```
SELECT name, salary
FROM employees
ORDER BY salary DESC
LIMIT 3;
```

8. Count the number of users who signed up each month

Question:

Assume there is a users table with signup_date. Count users per month.

Answer:

```
SELECT
  DATE_TRUNC('month', signup_date) AS signup_month,
  COUNT(*) AS user_count
FROM users
GROUP BY signup_month
ORDER BY signup_month;
```

9. Get the total and average spend of each user from a transactions table

Question:

Use a transactions table with user_id and amount.

Answer:

```
SELECT user_id,
       SUM(amount) AS total_spent,
       AVG(amount) AS average_spent
FROM transactions
GROUP BY user_id;
```

10. Find duplicate entries by email in a users table

Question:

Detect duplicate emails in a table.

Answer:

```
SELECT email, COUNT(*)
FROM users
GROUP BY email
HAVING COUNT(*) > 1;
```
