

Measure of Dispersion

① Variance

{ Spread is more }

② Standard Deviation

→ Distr 2

Agus 1 = { 2, 2, 4, 4 } → Distr 1

Agus 2 = { 1, 1, 5, 5 }

$$\mu = \frac{2+2+4+4}{4} = 3$$

{ Spread is less }

$$\mu = \frac{1+1+5+5}{4} = 3$$

① Variance

Population Data {N} → population size

Sample Data {n} → Sample Mean ($\bar{x}$)

$$\sigma^2 = \sum_{i=1}^N \frac{(x_i - \mu)^2}{N}$$

$$s^2 = \sum_{i=1}^n \frac{(x_i - \bar{x})^2}{n-1}$$

Agus 1 = { 2, 2, 4, 4 }

Agus 2 = { 1, 1, 5, 5 }

$$\mu = \frac{2+2+4+4}{4} = 3$$

$$\mu = \frac{1+1+5+5}{4} = 3$$

Imp Interview

x_i	μ	$(x_i - \mu)^2$
2	3	1
2	3	1
4	3	1
4	3	1
$N=4$		$\frac{4}{4} = 1$ → σ^2

x_i	μ	$(x_i - \mu)^2$
1	3	4
1	3	4
5	3	4
5	3	4
$N=4$		$\sum \frac{16}{4} = 4$
